Omar Sherif

FULL-STACK DEVELOPER & SOFTWARE ENGINEER

PROFESSIONAL SUMMARY

Versatile and results-driven Software Engineer working across full-stack web development, data analysis and data science, AI-focused solutions, SEO, CRM automation, cloud infrastructure, and ERP systems. Experienced across the full software development lifecycle, from database architecture and backend services to frontend interfaces, deployment, automation, integrations, and search optimization. Focused on building secure, maintainable, high-performance, and scalable solutions.

CORE AREAS

Full-Stack Web Development	**Data Analysis & Data Science**	**AI & AI-powered Solutions**
SEO / AEO / GEO	**ERP & Business Systems**	**CRM & Workflow Automation**

TECHNICAL SKILLS

Frontend	JavaScript (ES6+), TypeScript, React.js, Next.js, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Bootstrap, Material-UI
Backend & APIs	Node.js, Express.js, RESTful APIs, GraphQL, Next.js API Routes, WebSockets, Webhooks, JSON
CRM	Salesforce, HubSpot, Zoho, GoHighLevel, Odoo; CRM pipelines, workflows, lead stages and data routing
Automation	Make, Zapier, n8n, CRM Workflows, Pipelines, Process Automation
Database & Cloud	PostgreSQL, MySQL, MongoDB, Supabase, Firebase, AWS (S3/EC2), Vercel, Heroku, Google Cloud Platform (GCP)
DevOps	Docker, CI/CD, GitHub Actions, Linux, Nginx/Web Servers, Domain & DNS, SSL, Monitoring & Logging
Developer Tools	Git & GitHub, Postman, JWT, Agile/Scrum, System Design, Software Architecture
Search Optimization	SEO, AEO, GEO, Search Intent, Keyword Analysis, Schema Markup, FAQ Schema, AI Search Visibility

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineering

- Develop and maintain websites, internal systems, business applications, and CRM-connected workflows across the full development lifecycle.
- Build backend services and integrate APIs, Webhooks, JSON payloads, and external systems using REST and related technologies.
- Design and optimize CRM pipelines and workflows across Salesforce, HubSpot, Zoho, GoHighLevel, and Odoo.
- Build automation scenarios with Make, Zapier, and n8n to connect platforms, reduce repetitive manual tasks, and improve operational efficiency.
- Integrate communication and business services through APIs and Webhooks, including automated data synchronization and event-driven workflows.
- Develop and improve frontend interfaces while maintaining a consistent user experience.
- Work with databases, improve queries and data models, and optimize application performance.
- Write clean, secure, maintainable code and refactor existing systems to improve structure and scalability.
- Diagnose technical issues through debugging, data-flow testing, and troubleshooting and implement reliable solutions.
- Use Git and GitHub professionally for branching, change management, pull requests, and code reviews.
- Contribute to deployment, production updates, and ongoing system stability.

CLOUD INFRASTRUCTURE, DEVOPS & DEPLOYMENT

- Deploy and manage applications across production and staging environments.
- Work with Docker, CI/CD pipelines, GitHub Actions, Linux, Nginx, web servers, domains, DNS, and SSL certificates.
- Monitor applications and infrastructure through logging, performance monitoring, and troubleshooting.
- Apply automation, optimization, integration, and scalability practices to improve the technical environment.

DATA, AI, ERP & BUSINESS SYSTEMS

- Work across data analysis and data science use cases alongside software engineering and application development.
- Develop and support ERP systems that connect business workflows, inventory, staff roles, reporting, and operational processes.
- Build analytics dashboards and dynamic reporting experiences for business data and operational visibility.
- Apply AI-focused approaches and improve visibility across AI and generative search experiences.

CLOUD & INFRASTRUCTURE

- Google Cloud Platform (GCP): Compute Engine, Cloud Run, Cloud SQL, Cloud Storage, VPC & Networking, IAM & Permissions, and Load Balancing.
- Work with Logging & Monitoring, Secret Manager, backup strategies, and disaster recovery planning.
- Manage production and staging environments while improving resource usage and controlling cloud costs.
- Apply cloud-security fundamentals and protect applications, infrastructure, and company data.

CRM & AUTOMATION INTEGRATION

- Configure CRM pipelines, workflows, lead stages, task automation, and data routing across supported CRM platforms.
- Create multi-step automation scenarios using Make, Zapier, and n8n, connecting CRM records with external services.
- Build and troubleshoot REST API and Webhook integrations, working with JSON data and authentication flows.
- Test end-to-end data flows, identify integration failures, and implement reliable fixes.

SEARCH OPTIMIZATION — SEO, AEO & GEO

- Apply modern SEO practices with a focus on AEO (Answer Engine Optimization) and GEO for AI-powered search experiences.
- Analyze keywords and translate them into real user questions based on Search Intent.
- Restructure and improve existing content so answers are direct, useful, and easy for search and answer engines to understand.
- Work with Schema Markup, including FAQ Schema and other structured data appropriate to the content.
- Improve visibility across AI and generative search experiences such as ChatGPT, Perplexity, and Google SGE.
- Consider voice-search visibility and answer-focused content structure.

SELECTED PROJECTS

Enterprise ERP & Inventory Management System

- Architected and implemented a comprehensive multi-tenant ERP system to streamline business workflows, multi-warehouse inventory, and staff roles.
- Created a secure, real-time analytics dashboard with dynamic reporting using React.js and customized charting libraries.
- Optimized relational database performance using PostgreSQL, custom stored procedures, and relational models for heavy transactional loads.
- Built a secure backend API with robust authentication and token-based authorization using Node.js.
- Integrated business workflows with CRM/automation processes using REST APIs, Webhooks, JSON, and external automation platforms.

E-Commerce Platform & Content Management System

- Developed a high-performance, SEO-optimized e-commerce solution using Next.js server-side rendering (SSR) and incremental static regeneration (ISR).
- Integrated cloud-based data storage using Supabase and Firebase for reliable product management.
- Designed modular, state-driven interfaces using TypeScript and Redux Toolkit for complex client-side interactions and cart states.
- Integrated secure third-party payment gateways and delivery-tracking APIs, reducing checkout failure rates by 15%.

EDUCATION

Bachelor of Science in Computer Science — 4th Year Student

Faculty of Computers and Artificial Intelligence

CORE COMPETENCIES

- Strong foundations in Object-Oriented Programming (OOP), Data Structures, and Algorithms.
- Excellent problem-solving capabilities with a focus on performance, scalability, and reliable system design.
- Highly adaptive, proactive communicator with experience working in agile and collaborative environments.
- Ownership mindset with the ability to analyze requirements, propose solutions, prioritize work, and communicate progress clearly.
